THE NATIONAL INDUSTRIAL PARTICIPATION PROGRAMME

INTRODUCTION

The National Industrial Participation (NIP) Programme, which is applicable to all government procurement contracts that have an imported content, became effective on the 1 September 1996. The NIP policy and guidelines were fully endorsed by Cabinet on 30 April 1997. In terms of the Cabinet decision, all state and parastatal purchases / lease contracts (for goods, works and services) entered into after this date, are subject to the NIP requirements. NIP is obligatory and therefore must be complied with. The Industrial Participation Secretariat (IPS) of the Department of Trade and Industry (DTI) is charged with the responsibility of administering the programme.

1 PILLARS OF THE PROGRAMME

1.1 The NIP obligation is benchmarked on the imported content of the contract. Any contract having an imported content equal to or exceeding US$ 10 million or other currency equivalent to US$ 10 million will have a NIP obligation. This threshold of US$ 10 million can be reached as follows:

(a) Any single contract with imported content exceeding US$10 million.

(b) Multiple contracts for the same goods, works or services each with imported content exceeding US$3 million awarded to one seller over a 2 year period which in total exceeds US$10 million.

(c) A contract with a renewable option clause, where should the option be exercised the total value of the imported content will exceed US$10 million.

(d) Multiple suppliers of the same goods, works or services under the same contract, where the value of the imported content of each allocation is equal to or exceeds US$ 3 million worth of goods, works or services to the same government institution, which in total over a two (2) year period exceeds US$10 million.

1.2 The NIP obligation applicable to suppliers in respect of sub-paragraphs 1.1 (a) to 1.1 (c) above will amount to 30 % of the imported content whilst suppliers in respect of paragraph 1.1 (d) shall incur 30% of the total NIP obligation on a pro-rata basis.

1.3 To satisfy the NIP obligation, the DTI would negotiate and conclude agreements such as investments, joint ventures, sub-contracting, licensee production, export promotion, sourcing arrangements and research and development (R&D) with partners or suppliers.
1.4 A period of seven years has been identified as the time frame within which to discharge the obligation.

2 REQUIREMENTS OF THE DEPARTMENT OF TRADE AND INDUSTRY

2.1 In order to ensure effective implementation of the programme, successful bidders (contractors) are required to, immediately after the award of a contract that is in excess of **R10 million** (ten million Rands), submit details of such a contract to the DTI for reporting purposes.

2.2 The purpose for reporting details of contracts in excess of the amount of R10 million (ten million Rands) is to cater for multiple contracts for the same goods, works or services; renewable contracts and multiple suppliers for the same goods, works or services under the same contract as provided for in paragraphs 1.1(b) to 1.1. (d) above.

3 BID SUBMISSION AND CONTRACT REPORTING REQUIREMENTS OF BIDDERS AND SUCCESSFUL BIDDERS (CONTRACTORS)

3.1 Bidders are required to sign and submit this Standard Bidding Document (SBD 5) together with the bid on the closing date and time.

3.2 In order to accommodate multiple contracts for the same goods, works or services; renewable contracts and multiple suppliers for the same goods, works or services under the same contract as indicated in sub-paragraphs 1.1 (b) to 1.1 (d) above and to enable the DTI in determining the NIP obligation, successful bidders (contractors) are required, immediately after being officially notified about any successful bid with a value in excess of R10 million (ten million Rands), to contact and furnish the DTI with the following information:

- Bid / contract number.
- Description of the goods, works or services.
- Date on which the contract was accepted.
- Name, address and contact details of the government institution.
- Value of the contract.
- Imported content of the contract, if possible.

3.3 The information required in paragraph 3,2 above must be sent to the Department of Trade and Industry, Private Bag X 84, Pretoria, 0001 for the attention of Mr Elias Malapane within five (5) working days after award of the contract. Mr Malapane may be contacted on telephone (012) 394 1401, facsimile (012) 394 2401 or e-mail at Elias@thedti.gov.za for further details about the programme.

4 PROCESS TO SATISFY THE NIP OBLIGATION

4.1 Once the successful bidder (contractor) has made contact with and furnished the DTI with the information required, the following steps will be followed:

a. the contractor and the DTI will determine the NIP obligation;
b. the contractor and the DTI will sign the NIP obligation agreement;
c. the contractor will submit a performance guarantee to the DTI;
d. the contractor will submit a business concept for consideration and approval by the DTI;
e. upon approval of the business concept by the DTI, the contractor will submit detailed business plans outlining the business concepts;
f. the contractor will implement the business plans; and

g. the contractor will submit bi-annual progress reports on approved plans to the DTI.

4.2 The NIP obligation agreement is between the DTI and the successful bidder (contractor) and, therefore, does not involve the purchasing institution.

(iv) If the B-BBEE status level of contribution has been claimed or obtained on a fraudulent
basis or any of the conditions of contract have not been fulfilled, the purchaser may, in addition to any other remedy it may have –

(a) disqualify the person from the bidding process;

(b) recover costs, losses or damages it has incurred or suffered as a result of that person’s conduct;

(c) cancel the contract and claim any damages which it has suffered as a result of having to make less favourable arrangements due to such cancellation;

(d) restrict the bidder or contractor, its shareholders and directors, or only the shareholders and directors who acted on a fraudulent basis, from obtaining business from any organ of state for a period not exceeding 10 years, after the audi alteram partem (hear the other side) rule has been applied; and

(e) forward the matter for criminal prosecution

CERTIFICATE OF INDEPENDENT BID DETERMINATION

1 This Standard Bidding Document (SBD) must form part of all bids¹ invited.

2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).² Collusive bidding is a pe se prohibition meaning that it cannot be justified under any grounds.

3 Treasury Regulation 16A9 prescribes that accounting officers and accounting authorities must take all reasonable steps to prevent abuse of the supply chain management system and authorizes accounting officers and accounting authorities to:

   a. disregard the bid of any bidder if that bidder, or any of its directors have abused the institution’s supply chain management system and or committed fraud or any other improper conduct in relation to such system.

   b. cancel a contract awarded to a supplier of goods and services if the supplier committed any corrupt or fraudulent act during the bidding process or the execution of that contract.

4 This SBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.

5 In order to give effect to the above, the attached Certificate of Bid Determination (SBD 9) must be completed and submitted with the bid:

¹ Includes price quotations, advertised competitive bids, limited bids and proposals.

² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.

1 PURPOSE
This document provides the terms of reference for a waste technical specialist to be appointed who will assist the Department of Environmental Affairs (DEA) to develop a standard for waste derived fuel (WDF) and a standard operating procedure (SOP) for blending platforms. This will support Government's drive to ensure the protection of the environment through implementing the waste hierarchy.

2 INTRODUCTION AND BACKGROUND
The recently promulgated National Environmental Management: Waste Act as well as the Policy on Thermal Treatment of General and Hazardous Waste confirms Government's commitment to the continuous development and implementation of waste management options that are consistent with the principles of the waste management hierarchy. South Africa has an intensive, growing industrial and manufacturing economy, which results in the generation of general and hazardous wastes that is increasing at an estimated rate of 2-3% annually. The disposal of general and hazardous waste to landfill is currently the primary option for waste management in the country. However, in many instances landfilling is not the best environmental option in terms of the waste management hierarchy. Other technologies do exist in the country although they are limited in number and capacity. Limited incineration facilities do exist, these technologies are however generally used for specific waste steams for example health care risk waste or are located at industrial premises and dispose of specific industrial wastes associated with that industry. Furthermore, no effort is made to retain and utilise the energy generated.

The Thermal Treatment Policy supports the utilisation of waste in industrial processes for the purpose of energy and/or resource recovery, for example the use of waste as an alternative fuel and/or raw material (AFR) by the cement industry or the reprocessing of waste oils for use as an industrial fuel. Furthermore, one of the objectives of the soon to be promulgated Waste Classification and Management Regulations is to divert waste from landfill in line with the waste management hierarchy. Accordingly the DEA, in support of the beneficial recovery of resources from waste in a manner that does not harm the environment or health, intends to promote the diversion of waste from landfill by implementing mechanisms for facilitating waste re-use, recycling and recovery. This will include restrictions on the types of waste that may be landfilled encouraging the reuse of such waste including used oils and other waste streams with a certain calorific value.
3 PROBLEM ANALYSIS

In creating a WDF, unless a single waste stream is being used, the blending of such waste to reach a consistent homogenous product meeting certain performance specifications is required. The resulting alternative fuel must not result in greater harm to human health and the environment than use of the virgin product. The preparation or blending of wastes for further use requires a properly designed facility. Without such blending facilities many waste streams that could be utilised as an AFR would typically be disposed of to landfill without recovery. These facilities must however operate to standards which are protective to human health and the environment and similarly produce WDF which ensure environmental protection. Although the blending of waste for use as an AFR is a well-proven and well-established technology in the Europe, America and Australia very little experience exists in South Africa with respect to the operational requirements of these blending facilities. To date only one authorisation has been granted for the establishment of a blending platform to support the cement co-processing industry within South Africa. With respect to the waste oil industry in South Africa several waste oil blending facilities exist in the country and significant quantities of waste oil are reprocessed and blended in the country for sale to a number of small and large users. No environmental standards exist for the WDF which determines the allowable constituents of various chemical constituents in the WDF.

As the Thermal Treatment Policy has been completed and noting that the revision of the waste classification system for the country is underway and aims to promote the diversion of waste from landfill, it is expected that there will be an increase in the use of WDF. Furthermore, the Minister's approval of the industry waste tyre plan may encourage the use of waste tyres as an alternative energy source.

To ensure that WDF do not impact on the environmental and that blending facilities meet the best available technology and environmental practices it is necessary to control the waste streams used as an WDF and to develop a SOP that will apply to blending facilities operating in South Africa. The standards will ensure protection of the environment and provide guidance to both industry and government when developing and considering such applications and using such fuels and will ensure that certain undesirable waste streams are not used as an AFR.

The DEA now requires the assistance of an expert working in the waste field and experienced in the use of waste as an alternative fuel as well as the requirements for design and operation of to assist the department in undertaking the development of WDF standards and a SOP for a blending platform.

4 OVERALL PROJECT OBJECTIVE

The overall objective of the consultancy is framed as follows:

Develop waste derived fuel standards and a standard operating procedure for the design and operation of a blending platform.
5 IMMEDIATE PROJECT OBJECTIVES
In order to contribute to the overall project objective, the consultancy has the following immediate objectives:

5.1 Immediate Objective A - Inception meeting and detailed workplan
5.1.1 Objective - Inception meeting and detailed workplan
An inception meeting is to be held where aspects of the project will be discussed and agreed between the consultant and the DEA project team. A detailed workplan is then to be developed by the consultant team which will detail the project activities and timeframes for outputs.

5.1.2 Outputs - Inception meeting and detailed workplan
The consultant team will draft and submit a detailed workplan which will be approved by the Project Manager after the inception meeting. The workplan will include details on how activities will be achieved and how the local consultants will be involved and the work for which they will take responsibility.

5.2 Immediate Objective B - International literature review

Objective - International literature review
An international literature review is to be undertaken to provide information on the use of WDF including, amongst others recycled waste oils, and the operation of blending facilities in selected countries including but not limited to: Norway, Switzerland, United Kingdom, Germany, Brazil and Australia. The literature review must include, amongst others, the following aspects:

- common waste streams used;
- maximum allowable concentration of chemical constituents of wastes used;
- specifications for the blended waste;
- specifications for the recycled oils;
- blending facilities in operation;
- the waste acceptance procedures in place;
- sectors utilising the WDF as a resource;
- laboratory and analytical requirements;
- handling, transport and storage of the different waste streams;
- preparation and processing of the different waste streams;
- control measures in place for fugitive emissions;
- emission monitoring requirements;
- quality control measures;
- management procedures required;
- emergency procedures required;
- conditions of authorisations in place;
- reporting requirements;
- risk assessment and management measures, and
- quality protocols in place.

In addition the literature review is to consider the manner in which standard performance requirements are implemented and enforced in the various counties and the requirements set on industries using the WDF as an energy source. Definitions that may be considered to be useful should also be included in the review. The review must also include any restrictions in place in these countries which relate to use and preparation of WDF.

5.2.3  **Outputs - International literature review**

Working in close cooperation with the DEA project team the consultant must generate a report on existing WDF specifications as well as the operating requirements of blending facilities in selected countries which include but should not be limited to Norway, Switzerland, United Kingdom, Germany, Brazil and Australia. The literature review should focus on the common waste streams utilised, limits of chemical constituents of WDF, the best practice in terms of preparation of the various waste streams for further use, the SOP in place highlighting the storage, handling and preparation methods for the different types of waste and the environmental, health and safety risks and mitigation measures associated with such facilities. The report must indicate the specifications of WDF including recycled waste oils set in these countries, the design and operation of blending facilities, details on how the utilisation of WDF is controlled as well as various licencing processes in place to control in the operation of such facilities.

5.3  **Immediate Objective C - Local literature review**

5.3.1  **Objective - Local literature review**

A local literature review is to be undertaken to provide information on the current use of WDF, including amongst others recycled waste oils, within South Africa as well as the opportunities to utilise other waste types as an alternative fuel source in the future. The review will include an assessment of any industrial facilities currently blending waste for use as an alternative fuel, the procedures in place in preparing the waste as well as the end use of the resulting product. This review must include but not be limited to existing environmental authorisation conditions and requirements, SANS standards and MHI requirements associated with, amongst others:
- tank specifications;
- electricity specifications;
- oil specifications;
- mechanical requirements;
- fuel specifications; and
- risk management requirements.
The review must include an evaluation of the documents of the approved and proposed local blending facilities designed to blend waste and prepare AFR highlighting any gaps or shortcomings in terms of international requirements for such an activity. The review must also consider current requirements for waste oil blending facilities noting any gaps or shortcomings in when benchmarked against international requirements for such facilities.

5.3.2 **Output - Local literature review**

The consultants must generate a report documenting findings of the local literature review which outlines current use of WDF, the control mechanisms in place to regulate industry utilising the WDF, any existing blending facilities in operation and the existing requirements that need to be met by such facilities. The report will also identify current gaps and future opportunities to utilise waste as an alternative fuel.

5.4 **Immediate Objective D – Waste derived fuel standard**

5.4.1 **Objective - Develop a standard for WDF**

Based on the review of international best practice regarding use of WDF as well as existing local legislation propose the limits for the chemical constituents of WDF including recycled oils and the performance parameters that should be applied when utilizing WDF in South Africa. The limits will ensure that the WDF does not result in greater harm to human health and the environment than use of virgin product. This standard will include details on what legal obligations must be met by any entity utilizing the WDF. The consultant will develop a quality standard that prescribes the criteria for the production of waste derived fuels from a specific waste type. This standard will also indicate how compliance may be demonstrated and will identify the point at which the waste, for example, waste oil, having been the subject of a complete recovery operation may become a product or material that can be either reused by business or industry, or supplied into other markets, enabling such fully recovered products to be used without the need for a waste management licence. Taking into account the approved industry waste tyre plan and the potential for energy recovery from waste tyres, the consultant will also develop a quality standard that prescribes the criteria for the use of waste tyres as an alternative fuel.

5.4.2 **Output - Develop a standard for WDF**

The consultant must recommend the limits for the chemical constituents of WDF that should be prescribed, including reasons for the recommendations. As a minimum the consultant will develop limits for heavy metals including nickel, mercury, chromium, vanadium, zinc, lead and copper as
well as halogens and volatile organic compounds and will include performance parameters such as
the flash point, waste content, ash content, carbon residue, total sediment. The consultant will
develop a quality standard that prescribes the criteria for the production of a WDF which indicates
when such an activity would no longer require a waste management licence as well as a quality
standard that prescribes the protocol to be followed when utilising waste tyres as an alternative fuel
source.

5.5 Immediate Objective E – Standard operating procedure for the design and operation of a waste blending platform

5.5.1 Objective – A standard operating procedure for the design and operation of a blending platform

Based on the international and local literature reviews and in consultation with DEA and the relevant stakeholders the consultant must develop a SOP to be followed when designing and operating a blending platform including but not limited to:

- waste selection, receipt and storage;
- materials handling and preparation including mixing;
- plant design;
- transportation to and from the site;
- laboratory requirements;
- pollution abatement requirements;
- monitoring requirements;
- reporting requirements;
- risk assessment requirements; and
- environmental management plan requirements.

The SOP would ultimately provide the minimum requirements that should be met by any facility currently or intending to prepare waste for use as an alternative fuel source. Compliance with the SOP could be used as motivation to the Minister to consider listing a specific waste management activity as an activity that does not require a waste management licence. The SOP would also be
used by government when considering any waste licence applications received that propose utilizing waste as an alternative fuel source.

5.5.2 Outputs–A standard operating procedure for the design and operation for a blending platform

Taking into account the findings of the international and local literature reviews the consultant must develop an SOP for the design and operation of waste blending facilities that could be used by both government and industry when considering such activities.

5.6 Immediate Objective F - Consultation process

5.6.1 Objective - Consultation process

The consultant will be responsible for organising and hosting a minimum of two stakeholder workshops where the outputs of the project will be discussed. The consultant will also be required to allow for focus group meetings with the relevant industries. Furthermore, the consultant must allow for consultation/s with the Provincial Environmental Affairs Departments to ensure that these authorities are aware of the SOP developed, consider and implement requirements thereof when reviewing waste licence applications for relevant activities. All comments raised during the process will be considered by the consultant whilst drafting the final documents. This will include consideration of comments received after gazetting of the norms and standards. In addition to external consultation, the consultant will be required to hold information sharing sessions with DEA officials. All meetings and workshops held throughout the project must be budgeted for by the consultant.

5.6.2 Output - Consultation process

The consultant team will be required to work closely with the relevant stakeholders and to present the relevant documents to key stakeholders for consideration and to revise the documents after the review of the comments received. This will include development of a comments and responses report which will be made available to all the stakeholders after completion of the process. All interaction with stakeholders would have been budgeted for as part of the project by the consultant.

When a person’s name has been endorsed on the Register, the person will be prohibited from doing business with the public sector for a period not less than five years and not more than 10 years. The National Treasury is empowered to determine the period of restriction and each case will be dealt with on its own merits. 26. Termination for insolvency

26.1 The purchaser may at any time terminate the contract by giving written notice to the supplier if the supplier becomes bankrupt or otherwise insolvent. In this event, termination will be without compensation to the supplier, provided that such termination will not prejudice or affect any right of action or remedy which has accrued or will accrue thereafter to the purchaser.

27. Settlement of Disputes

27.1 If any dispute or difference of any kind whatsoever arises between the purchaser and the supplier in connection with or arising out of the contract, the parties shall make every effort to resolve amicably such dispute or difference by mutual consultation.
