CERTIFICATE OF INDEPENDENT BID DETERMINATION

1 This Standard Bidding Document (SBD) must form part of all bids¹ invited.

2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).² Collusive bidding is a pe se prohibition meaning that it cannot be justified under any grounds.

3 Treasury Regulation 16A9 prescribes that accounting officers and accounting authorities must take all reasonable steps to prevent abuse of the supply chain management system and authorizes accounting officers and accounting authorities to:

   a. disregard the bid of any bidder if that bidder, or any of its directors have abused the institution’s supply chain management system and or committed fraud or any other improper conduct in relation to such system.

   b. cancel a contract awarded to a supplier of goods and services if the supplier committed any corrupt or fraudulent act during the bidding process or the execution of that contract.

4 This SBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.

5 In order to give effect to the above, the attached Certificate of Bid Determination (SBD 9) must be completed and submitted with the bid:

¹ Includes price quotations, advertised competitive bids, limited bids and proposals.

² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.

1. PURPOSE
To procure a stack emissions measurement system for the measurement of air pollutants from sources listed in terms of Section 21 of the National Environmental Management: Air Quality Act, 2004 (Act No. 39 of 2004) (AQA) as well as any other sources that release air pollutants to the atmosphere. The stack measurement equipment will be used by the Department's Air Quality Officers and Environmental Management Inspectors for compliance monitoring and enforcement purposes. In addition, the equipment will serve as an integral part of the Department's Atmospheric Emission Licensing Support Programme for Municipalities and Provinces.

2. INTRODUCTION AND BACKGROUND
The amendments to the AQA, which came into effect on 19 May 2014, resulted in the Minister becoming the Licensing Authority for the processing and issuing of Atmospheric Emission Licenses (AEL). As a result of the amendment the Department will be licensing, amongst others, Strategic Infrastructure Projects (SIPs), mining related activities and waste activities. In addition to the licensing function, the Department is also expected to perform compliance monitoring and enforcement functions for all AELs issued by the Minister. It will be the responsibility of the Department to ensure that the all license holders comply with the conditions of the AEL and take the necessary enforcement action in cases of non-compliance.

In order for the Department to effectively fulfil its responsibilities pertaining to the licensing, compliance monitoring and enforcement functions, both Air Quality Officials and Environmental Management Inspectors must have the required skills and expertise as well as the necessary tools. The stack monitoring system will allow the Department's officials to be able to verify emissions data submitted by facilities by enabling the officials to undertake independent emissions measurement.

The Department has also the responsibility of supporting Provincial and Municipal air quality officers in the execution of their air quality management functions. Many licensing authorities need continual capacitation and support due to a number of reasons. As air quality is a highly specialised field, it is difficult for most municipalities to have staff with all the requisite skills to effectively implement the provisions of the AQA. The stack monitoring system will form an integral part of the Department's Atmospheric Emission Licensing Support Programme. It will facilitate the practical demonstration of stack emissions measurement principles during capacity building training sessions.
3. **OBJECTIVES**

The Department of Environmental Affairs is looking to procure a portable stack emissions measurement & monitoring system that will allow the Department’s officials to undertake both isokinetic and gaseous measurements from a variety of industrial emissions stacks. The system must be able to handle typical industrial stack conditions of high temperature, moisture and particulate matter. In addition, the system must be able to measure other stack parameters such temperature, pressure and gas velocity.

The objective of procuring the stack emission measurement system is to empower the officials of the Department with the necessary tools and expertise in order to:

- Verify emission monitoring results submitted by facilities in order to demonstrate compliance with the NEMAQA as well as ascertaining whether there is serious harm to the environment;
- Take air quality samples during compliance monitoring and enforcement campaigns;
- Provide licensing authorities with the required skill to analyse and interpret emission monitoring reports, therefore capacitating them.
