CERTIFICATE OF INDEPENDENT BID DETERMINATION

1 This Standard Bidding Document (SBD) must form part of all bids¹ invited.

2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).² Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.

3 Treasury Regulation 16A9 prescribes that accounting officers and accounting authorities must take all reasonable steps to prevent abuse of the supply chain management system and authorizes accounting officers and accounting authorities to:
   
a. disregard the bid of any bidder if that bidder, or any of its directors have abused the institution’s supply chain management system and or committed fraud or any other improper conduct in relation to such system.
   
b. cancel a contract awarded to a supplier of goods and services if the supplier committed any corrupt or fraudulent act during the bidding process or the execution of that contract.

4 This SBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.

5 In order to give effect to the above, the attached Certificate of Bid Determination (SBD 9) must be completed and submitted with the bid:

¹ Includes price quotations, advertised competitive bids, limited bids and proposals.

² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.
CERTIFICATE OF INDEPENDENT BID DETERMINATION

I, the undersigned, in submitting the accompanying bid:

________________________________________________________________________
(Bid Number and Description)

in response to the invitation for the bid made by:

______________________________________________________________________________
(Name of Institution)

I certify, on behalf of:_______________________________________________________
(Name of Bidder) that:

4. Each person whose signature appears on the accompanying bid has been authorized by the bidder to determine the terms of, and to sign the bid, on behalf of the bidder;
5. For the purposes of this Certificate and the accompanying bid, I understand that the word “competitor” shall include any individual or organization, other than the bidder, whether or not affiliated with the bidder, who:
   
   (a) has been requested to submit a bid in response to this bid invitation;
   (b) could potentially submit a bid in response to this bid invitation, based on their qualifications, abilities or experience; and
   (c) provides the same goods and services as the bidder and/or is in the same line of business as the bidder.
6. The bidder has arrived at the accompanying bid independently from, and without consultation, communication, agreement or arrangement with any competitor. However communication between partners in a joint venture or consortium\(^3\) will not be construed as collusive bidding.

7. In particular, without limiting the generality of paragraphs 6 above, there has been no consultation, communication, agreement or arrangement with any competitor regarding:

   (a) prices;
   (b) geographical area where product or service will be rendered (market allocation)
   (c) methods, factors or formulas used to calculate prices;
   (d) the intention or decision to submit or not to submit, a bid;
   (e) the submission of a bid which does not meet the specifications and conditions of the bid; or
   (f) bidding with the intention not to win the bid.

8. In addition, there have been no consultations, communications, agreements or arrangements with any competitor regarding the quality, quantity, specifications and conditions or delivery particulars of the products or services to which this bid invitation relates.

9. The terms of the accompanying bid have not been, and will not be, disclosed by the bidder, directly or indirectly, to any competitor, prior to the date and time of the official bid opening or of the awarding of the contract.

\(^3\) Joint venture or Consortium means an association of persons for the purpose of combining their expertise, property, capital, efforts, skill and knowledge in an activity for the execution of a contract.
10. I am aware that, in addition and without prejudice to any other remedy provided to combat any restrictive practices related to bids and contracts, bids that are suspicious will be reported to the Competition Commission for investigation and possible imposition of administrative penalties in terms of section 59 of the Competition Act No 89 of 1998 and or may be reported to the National Prosecuting Authority (NPA) for criminal investigation and or may be restricted from conducting business with the public sector for a period not exceeding ten (10) years in terms of the Prevention and Combating of Corrupt Activities Act No 12 of 2004 or any other applicable legislation.

1 PURPOSE

1.1 To appoint a suitable independent Service provider/s that can support Department of Environmental Affairs (DEA) in collaboration with the South African National Parks, Western Cape Nature Conservation Board and Eastern Cape Parks and Tourism Agency with the development of an Environmental Management Framework (EMF) for the Cape Floral Region Protected Areas (CFRPA).

1.2 The purpose of the EMF is to address fires prevention, managing invasive species, ensuring adequate resources to manage the world heritage site, promoting responsible tourism, ensuring appropriate urban development that does not harm the site, and developing models to forecast potential climate changes. In addition the CFRPA EMF seeks to provide for a strategic environmental informant to environmental and land use planning and decision-making in order to ensure that the national commitments to the World Heritage Convention are implemented through enabling the appropriate planning, development and management of the CFRPA WHS for the conservation of biodiversity.

2 INTRODUCTION AND BACKGROUND

2.1 The Cape Floral Region has been recognized as one of the most special places for plants in the world in terms of diversity, density and number of endemic species. It is one of the richest areas for plants when compared to any similar sized area in the world. It represents less than 0.5% of the area of Africa but is home to nearly 20% of the continent's flora. The outstanding diversity, density and endemism of the flora are among the highest worldwide. Some 69% of the estimated 9,000 plant species in the region are endemic, with 1,736 plant species identified as threatened and with 3,087 species of conservation concern. The Cape Floral Region has been identified as one of the world's 35 biodiversity hotspots.

2.2 Subsequently, the Cape Floral Region Protected Areas (CFRPA) World Heritage Site was inscribed on the United Nations Educational, Scientific and Cultural Organisation (Unesco) World Heritage List in 2004 under criteria (ix) and (x). At the time of inscription in 2004, the site was made up of 8 protected areas making about 553,000 hectares located in the southwest corner of South Africa, centred on the Western Cape Province but also expanding into the Eastern Cape Province. Following inscription, the site was successfully proclaimed in terms of national legislation as a World Heritage Site on 30 January 2009. Several Committee decisions have welcomed the State Party's intentions to extend the property to include additional areas of value and these areas were approved by the Unesco World Heritage Committee during its 39th session in July 2015.

2.3 The approved extension by Unesco bring the size of the World Heritage Site to 1,094,742 hectares thus significantly increasing the size of South Africa's biodiversity areas with outstanding international recognition. The extension also increases the number of protected area clusters making up the Cape Floral Region from 8 to 13 protected areas.
3 OBJECTIVES

3.1 To develop an EMF tool to serve as a spatial screening mechanism for EIAs in the study area through the development of environmental constraints dataset which indicates the issues that should be investigated in more detail during the EIA process.

3.2 To develop an EMF as a tool that provides strategic context for EIA applications in the study area through the development of management zones dataset to indicate through the decision support matrix whether an envisaged activity is compatible in a specific area/zone or not as seen from a strategic perspective.

3.3 To develop an EMF as a tool to inform strategic spatial planning in the area through the development of management zones dataset which, in future, inform the development of a Spatial Development Framework (SDF) responsible for strategic spatial planning and guiding land use management in the area.

Figure 1: Map indicating the location of the study area.
4 STUDY AREA

4.1 The study area of the EMF should cover the core, buffer and Unesco approved extensions of the Cape Floral Region World Heritage Site.

4.2 The study area should cover the Cape floral region’s thirteen (13) clusters, namely: Cedarberg Complex, Groot Winterhoek Complex, Table Mountain National Park, Boland Mountain Complex, Hexrivier Complex, Riviersonderend Nature Reserve, Agulhas Complex, De Hoop Nature Reserve, Langeberg Complex, Garden Route Complex, Anysberg Nature Reserve and Swartberg Complex.

5 PROBLEM STATEMENT

5.1 The CFR faces development pressures due to population growth with a potential to threaten the long-term integrity in the Cape Peninsula region if not managed properly. There are various adopted EMF tools that are being used in both the Western Cape (Garden route, Sandveld, City of Cape Town, Saldahna bay, Central Karoo, Upper Breede and Drakeinstein) and Eastern Cape (Great Kei Cannon Rocks Coastal and Nelson Mandela Bay) provinces to guide decision making in environmental management and development planning. However, the aforementioned EMF tools are not being aligned to apply in the world heritage site but could serve as valuable tools in the development and alignment of the Cape Floral EMF.

6 PROJECT MANAGEMENT

6.1 An inception meeting will be hosted by DEA to:

6.1.1 Introduce the Consultant to the Project Management Team.

6.1.2 Establish the Project Management Team (PMT) which will include DEA, DEA&DP, DEDEAT, South African National Parks, Western Cape Nature Conservation Board and Eastern Cape Parks and Tourism Agency.

6.1.3 Establish a Project Steering Committee (PSC), which will include representatives from the DEA, DEA&DP, DEDEAT, SANParks, Western Cape Nature Conservation Board, Eastern Cape Parks and Tourism Agency, South African Heritage Resources Agency (SAHRA) and relevant community based organisations (CBO), NGO and broader key stakeholders.

6.1.4 Clarify roles and responsibilities of the Project Steering Committee.

6.1.5 Clarify upon the roles and responsibilities of the Project Management Team.

6.1.6 Clarify upon the consultation process (i.e. scope, mechanisms and stakeholder groupings to be included.

6.1.7 Clarify the scope of work of the project.

6.1.8 Clarify upon the project plan and time frames for the deliverables.

6.1.9 PSC progress meetings shall be held and reports submitted at intervals agreed upon with the project team. Document workshops and PSC meetings held and recorded. Action based minutes of the PSC meetings and any other meetings must be taken by the service provider/s and forwarded to the PSC within a week after the meeting.
6 LITERATURE REVIEW

The consultancy team should ensure that the study takes cognisance of all appropriate and relevant pieces of legislations, tools/instruments, programmes, plans, policies and guidelines documentation available and sourced for the fulfilment of the objectives of the project.

7 EXPECTED OUTPUTS

PHASE 1: STATUS QUO ASSESSMENT

The status quo report must provide map and discuss the status of various environmental attributes in the study area, while also evaluating the importance of individual attributes to the area. The status quo analysis must consist of two distinct phases, namely:

- A gap analysis in which the availability and quality of existing data related to relevant attributes is determined; and
- An analysis of this data as part of and parallel to the ‘desired state of the environment’ analysis (Phase 2).

The status quo analysis should provide the opportunity to source all available data for the various aspects of the study area, evaluate these and provide an overview of the current status of a range of parameters related to:

- Strategic planning issues;
- Biophysical issues, including geology, topography and climate, biodiversity and conservation, hydrology and water resources, air quality and agricultural potential;
- Socio-economic issues, including socio-economic profile, infrastructure development, land use, heritage resources, tourism and mining.

PHASE 2: THE DESIRED STATE OF THE ENVIRONMENT (DSoE)

The DSoE phase must identify the strategic significant issues, identify environmental opportunities and constraints, and to clearly describe the desired future state of the environment. The DSoE must detail the identified conflicts between land-use planning, biodiversity issues and agriculture and identify the strategies needed for dealing with those conflicts. The deliverables from this phase is twofold in nature and include:

- a detailed development vision for the area, and
- a comprehensive set of development objectives related to the desired future state relating to the priority environmental issues within the area.

PHASE 3: ENVIRONMENTAL MANAGEMENT ZONES (EMZ)

In order to aid strategic environmental management in the area, environmental management zones must be delineated by grouping areas which share the same characteristics together with regards to land use and sensitivity. The EMZ must focus the attention of the relevant authority on the critically important areas and to facilitate effective decision making. Similarly, EMZ must be developed in such a way as to ‘red flag’ critical environmental areas and ensuring that any development applications lodged in the zones adhere to the management guidelines (Phase 4).
PHASE 4: STRATEGIC ENVIRONMENTAL MANAGEMENT PLAN (SEMP)

EMZ identified in phase 3 must be linked to management parameters and guidelines in the management guidelines document referred to as Strategic Environmental Management Plan (SEMP). The SEMP sets out strategic objectives, as well as targets and key performance indicators for each of the topics addressed in phase 1 and 2. SEMP must further set out the responsible organisations and possible timeframes for achieving the targets in the study area. In addition to the above, SEMP must consider:

- Environmental management priorities in the study area;
- Existing statutory and regulatory provisions (for example, Acts and regulations);
- Management guidelines sourced from other approved plans and programmes (for example, PSDFs and IDPs that have already adopted by the relevant authorities);
- Accepted ordinances and local authority provisions; and
- Existing provincial policies and guidelines

ENVIRONMENTAL MANAGEMENT FRAMEWORK REPORT

Input from various stakeholders and departments will be considered to ensure that the final product reflects the goals and objectives as set out in the ToR as well as the needs and desires of the relevant stakeholders.

- The final product will ensure that the goals and objectives for the area have been achieved.
- The final EMF will be accompanied by an interactive GIS using either a web based application or the free ArcReader software that can be installed on any computer to access the spatial data of the EMF.

EMF IN GIS FORMAT

Before the final EMF report is handed over to the Department, the service provider must prepare the training manual and provide GIS training to officials of DEA&DP, SANPARKS, Cape Nature Conservation Board and Eastern Cape Parks and Tourism Agency and Joint Management Committee and relevant District and Local Municipalities.

- During this phase a training manual will be developed and GIS training provided to all relevant officials involved. The training manual and GIS training will ensure that all relevant officials will be able to:
  - Successfully use the EMF products;
  - Access the spatial data via a GIS; and
  - Utilize the products in decision making processes.

8. REPORTS AND DOCUMENTATION

The service provider must make available, a copy of the Power Point presentation of the outputs of the project to the project team.

- The service provider is required to provide electronic copies in Ms Word and hard copies of all draft and final reports, to DEA, DEA&DP, SANPARKS, Cape Nature Conservation Board and Eastern Cape Parks and Tourism Agency and Joint Management Committee and any other relevant stakeholders.
- All GIS spatial information must be provided in three (3) external portable devices.
9 PROJECT DELIVERABLES

- Inception Report
- Draft Environmental Status Quo Report;
- Final Environmental Status Quo Report;
- Environmental Management Zones.
- Draft Strategic Environmental Management Plan.
- Final Strategic Environmental Management Plan.

| Step 2 | Status Quo Report | Apply the DPSIR model as an analysis framework during the status quo analysis phase. The DPSIR model is a reporting system that aims to provide a framework to analyse the cause and effects of environmental issues. It is important to note the DPSIR model will not be |
applied to the same extent as done in State of the Environment Reporting (SoER). The DPSIR model describes the environmental issues in terms of the following categories:

- **Driving forces and Pressures:** These are the underlying social and economic activities that lead to environmental change such as population growth, poverty, agriculture and industrial production. Pressures on the environment result from the driving forces, for example pollution of air, water, and soil from industrial production.

- **State and Impacts:** The state describes the current state of the environment and recent trends in environmental quality. Impacts are the consequences of the pressures on the environment for example, reduction in biodiversity, soil degradation, poor human health, and lack of clean water.

- **Responses:** This section describes the human responses to environmental change, including policies and management strategies to reduce environmental damage, rehabilitate damaged environments, and
encourage sustainable development.
Ground truthing of data should be conducted in line with the best practice methodology described in the 2006 provincial IEM information series number 9 entitled “Nature Surveys for Spatial Planning” and by using the latest available high resolution aerial imagery along with 2010 SPOT5 satellite imagery.

| Step 4 | Determination/Delineation of Environmental Management Zones | Divide the study area into environmental management zones based on the spatial component of the desired state of the environment and the bio-physical constraints and opportunities identified in Desired State of Environment Phase. These environmental management zones will facilitate future decision making on environmental requirements and acceptability of |
environmental authorization applications

- The first type will be areas in which the undertaking of an activity should be allowed to take place without any further investigation in the form of EIAs. These will be areas that can be identified as desirable for certain activities.

- The second type will be areas in which the undertaking of an activity may be allowed subject to an environmental authorization being granted in terms of the NEMA regulations. These areas will be linked to an activity list that will pro-actively guide project level decision making in the area in line with strategic environmental attributes.

- This is required to streamline authorization process such as EIA and land use authorizations. The last type will be areas in which the undertaking of an activity should not be considered. These will be areas that have been identified as undesirable for certain activities and are important for achieving the goals and targets set for reaching the envisaged desired state of the
| Step 5 | Strategic Environmental Management Plan | The SEMP should include strategies and guidelines required for the implementation of the EMF linked to institutional frameworks and a system to evaluate, monitor and report on progress made towards the desired state of the environment and land uses in the study area. During this phase a draft copy of the SEMP will have to be circulated and presented to relevant stakeholders for input. It is crucial that the contents of the SDFs in the area align with the provisions as contained in the SEMP. |
| Step 6 | Environmental Management Framework | Input from various stakeholders and departments will be considered to ensure that the final product reflects the goals and objectives as set out in the ToR as well as the needs and desires of the relevant stakeholders. |
| Step 7 | GIS Training and Training Manual | The final EMF will be accompanied by an interactive GIS using either a web based application or the free ArcReader software that can be installed on any computer to access the spatial data of the EMF. The training manual and GIS training will ensure that all relevant officials will be able to:  
  o Successfully use the EMF products;  
  o Access the spatial data via a GIS; and  
  o Utilize the products in decision making processes. |
| Step 8 | Action Plan and Final Reports | A glossy summary report, summarizing the EMFs and SEMP s will be developed in this final stage. |
| Step 9 | Review/Revise | Updating the draft report |
