CERTIFICATE OF INDEPENDENT BID DETERMINATION

1 This Standard Bidding Document (SBD) must form part of all bids¹ invited.

2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).² Collusive bidding is a pe se prohibition meaning that it cannot be justified under any grounds.

3 Treasury Regulation 16A9 prescribes that accounting officers and accounting authorities must take all reasonable steps to prevent abuse of the supply chain management system and authorizes accounting officers and accounting authorities to:
   a. disregard the bid of any bidder if that bidder, or any of its directors have abused the institution’s supply chain management system and or committed fraud or any other improper conduct in relation to such system.
   b. cancel a contract awarded to a supplier of goods and services if the supplier committed any corrupt or fraudulent act during the bidding process or the execution of that contract.

4 This SBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.

5 In order to give effect to the above, the attached Certificate of Bid Determination (SBD 9) must be completed and submitted with the bid:

¹ Includes price quotations, advertised competitive bids, limited bids and proposals.

² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.
CERTIFICATE OF INDEPENDENT BID DETERMINATION

I, the undersigned, in submitting the accompanying bid:

1 PURPOSE

To appoint a service provider to assist the Waste Bureau with an analysis of markets for recycled/reused/recovered plastic and tyre products in South Africa.

2 INTRODUCTION AND BACKGROUND

The waste legislation in South Africa (National Environmental Management: Waste Act, No 59 of 2008, as amended) is based on the waste hierarchy principles and advocates for waste reduction, re-use, recycling and recovery before waste disposal to landfill. While disposal to landfill remains the dominant waste management option in South Africa, recycling has gained momentum and is steadily increasing. Table 1 and 2 below shows the increase in the collection rates of different material in South Africa.

Both Tables 1 and 2 show a steady increase in the collection rates of the different materials. This implies that there are systems currently in place for collection that are good enough and there is improvement year on year. The collection for waste tyres, however increased drastically from 2011. This was as a result of the implementation of the Integrated Industry Waste Tyre Management Plan for tyres which established systems for the collection of the waste tyres. It is therefore logical to expect that the collection rates for paper and packaging will also increase significantly as soon as its Industry Waste Management Plan is implemented.
The introduction of Industry Waste Management Plans (IndWMPs) can thus be further expected to increase the existing recycling rates as it is envisaged that these will ensure the necessary infrastructure and systems to maximize the collection of material. This implies that the demand for facilities which will process these material will increase and consequently the production of products from these facilities (re-use, recycling or recovery operations) will also increase.

While the challenge now is accessing and collecting material due to lack of infrastructure and systems, it is envisaged that the challenge soon will be the creation of markets to absorb the products that will be produced. It is therefore imperative to understand the potential material applications available as well as their markets. While government has instituted policy changes to facilitate and encourage waste diversion from landfill, it may equally be important to institute policy change to facilitate and encourage markets that support the existing waste diversion programmes. South Africa advocates evidence based policy making, hence a study is imperative to establish the viability and impact of proposed markets.

3 OBJECTIVES

The Waste Bureau intends analyzing markets for products produced from the re-use/recycling/recovery of waste plastics and tyres through the following objectives:

- Establish the generation rates of waste tyres and plastics. (NB: This information already exists and can be accessed from the respective industry bodies. The Department of Environmental Affairs (DEA) is also busy with another study on plastics that will have this information).
- Establish current and potential markets for the products produced from the re-used/recycled/recovered waste tyres and plastics.
- Indicate treatment technologies associated with the products refered to above and interrogate their environmental suitability.
- Identify policy interventions to create and sustain viable markets.

4 SCOPE AND EXTENT OF WORK

The Waste Bureau is seeking a Service Provider that will undertake a market study analysis for waste tyre and plastic products.
4.1 Quantify the markets for recycled tyres and plastics

In order to quantify existing markets for recycled tyres and plastic products in South Africa, the following questions should be answered:

- What products are being made from waste tyres and plastics and their respective volumes?
- What are the key respective markets for such products?
- What are the global and local (South African) market trends for these products?
- What is the growth potential for such markets?
- Where are these products made? A geographic location should be given in order to display the distribution of processing plants / facilities across the country.
- Who are the players within these markets and where in the value chain are they placed?
- What existing products are these recycled products replacing? Could there also be substitutes for these recycled products? This analysis should be done on the basis of how the recycled products compare to the other products made from virgin materials in terms of their quality, performance and costs.
- What are the key drivers for these markets?
- What are the existing barriers/hindrances to these markets performing better than they are now? (hindrances to the uptake of the products)
- What are the barriers to entry into this sector for the different participants throughout the value chain (Collectors, primary processors, secondary processors etc)?

**Deliverable**: A market analysis report for the products of both waste tyres and plastics. The analysis should have both a global and a South African outlook.

4.2 Gap analysis and Interventions

Subsequent to determining the existing scenario in relation to the markets for re-used/recycled/recovered products from waste tyre and plastics, it is important to establish the gaps and areas for potential growth or even areas that need to be corrected within the South African context. The following are key actions to be undertaken in this section:

- Determine additional products that can be created from waste tyres and plastics that are currently not explored in South Africa. These products should be discussed with emphasis on their suitability for the South African scenario. The analysis can look at the following as a minimum:
  - Availability of material (e.g. the availability of the specific type of plastic required).
The costs of production.
Potential for job creation
Impacts of associated production facilities and the product applications.
What products would they replace and how would they compare in terms of performance and quality?

- Based on the respective market performance of these products as well as their key drivers, predict the potential performance of these market options within the South African context.
- Highlight the potential impacts as well as regulatory compliance requirements for these additional market options.
- Recommend interventions that can contribute towards the creation of sustainable markets for the products from the treatment of waste tyres and plastics.

Deliverable: A Gap Analysis and Interventions Report

- Ensure that the most recent and accurate data is used.
- Communicate and validate the findings of the study.

15.4 Upon receipt of such notice, the supplier shall, within the period specified in SCC and with all reasonable speed, repair or replace the defective goods or parts thereof, without costs to the purchaser.

21.2 If at any time during performance of the contract, the supplier or its subcontractor(s) should encounter conditions impeding timely delivery of the goods and performance of services, the supplier shall promptly notify the purchaser in writing of the fact of the delay, its likely duration and its cause(s). As soon as practicable after receipt of the supplier’s notice, the purchaser shall evaluate the situation and may at his discretion extend the supplier’s time for performance, with or without the imposition of penalties, in which case the extension shall be ratified by the parties by amendment of contract.

21.3 No provision in a contract shall be deemed to prohibit the obtaining of supplies or services from a national department, provincial department, or a local authority.

21.6 Upon any delay beyond the delivery period in the case of a supplies contract, the purchaser shall, without canceling the contract, be entitled to purchase supplies of a similar quality and up to the same quantity in substitution of the goods not supplied in conformity with the contract and to return any goods delivered later at the supplier’s expense and risk, or to cancel the contract and buy such goods as may be required to complete the contract and without prejudice to his other rights, be entitled to claim damages from the supplier.
