THE NATIONAL INDUSTRIAL PARTICIPATION PROGRAMME

INTRODUCTION

The National Industrial Participation (NIP) Programme, which is applicable to all government procurement contracts that have an imported content, became effective on the 1 September 1996. The NIP policy and guidelines were fully endorsed by Cabinet on 30 April 1997. In terms of the Cabinet decision, all state and parastatal purchases/lease contracts (for goods, works and services) entered into after this date, are subject to the NIP requirements. NIP is obligatory and therefore must be complied with. The Industrial Participation Secretariat (IPS) of the Department of Trade and Industry (dti) is charged with the responsibility of administering the programme.

1 PILLARS OF THE PROGRAMME

1.1 The NIP obligation is benchmarked on the imported content of the contract. Any contract having an imported content equal to or exceeding US$10 million or other currency equivalent to US$10 million will have a NIP obligation. This threshold of US$10 million can be reached as follows:

(a) Any single contract with imported content exceeding US$10 million.
   or
(b) Multiple contracts for the same goods, works or services each with imported content exceeding US$3 million awarded to one seller over a 2 year period which in total exceeds US$10 million.
   or
(c) A contract with a renewable option clause, where should the option be exercised the total value of the imported content will exceed US$10 million.
   or
(d) Multiple suppliers of the same goods, works or services under the same contract, where the value of the imported content of each allocation is equal to or exceeds US$3 million worth of goods, works or services to the same government institution, which in total over a two (2) year period exceeds US$10 million.

1.2 The NIP obligation applicable to suppliers in respect of sub-paragraphs 1.1 (a) to 1.1 (c) above will amount to 30% of the imported content whilst suppliers in respect of paragraph 1.1 (d) shall incur 30% of the total NIP obligation on a pro-rata basis.

1.3 To satisfy the NIP obligation, the dti would negotiate and conclude agreements such as investments, joint ventures, sub-contracting, licensee production, export promotion, sourcing arrangements and research and development (R&D) with partners or suppliers.
1.4 A period of seven years has been identified as the time frame within which to discharge the obligation.

2 REQUIREMENTS OF THE DEPARTMENT OF TRADE AND INDUSTRY

2.1 In order to ensure effective implementation of the programme, successful bidders (contractors) are required to, immediately after the award of a contract that is in excess of R10 million (ten million Rands), submit details of such a contract to the dti for reporting purposes.

2.2 The purpose for reporting details of contracts in excess of the amount of R10 million (ten million Rands) is to cater for multiple contracts for the same goods, works or services; renewable contracts and multiple suppliers for the same goods, works or services under the same contract as provided for in paragraphs 1.1.(b) to 1.1. (d) above.

3 BID SUBMISSION AND CONTRACT REPORTING REQUIREMENTS OF BIDDERS AND SUCCESSFUL BIDDERS (CONTRACTORS)

3.1 Bidders are required to sign and submit this Standard Bidding Document (SBD) 5 together with the bid on the closing date and time.

3.2 In order to accommodate multiple contracts for the same goods, works or services; renewable contracts and multiple suppliers for the same goods, works or services under the same contract as indicated in sub-paragraphs 1.1 (b) to 1.1 (d) above and to enable the dti in determining the NIP obligation, successful bidders (contractors) are required, immediately after being officially notified about any successful bid with a value in excess of R10 million (ten million Rands), to contact and furnish the dti with the following information:

- Bid / contract number.
- Description of the goods, works or services.
- Date on which the contract was accepted.
- Name, address and contact details of the government institution.
- Value of the contract.
- Imported content of the contract, if possible.

3.3 The information required in paragraph 3.2 above must be sent to the Department of Trade and Industry, Private Bag X 84, Pretoria, 0001 for the attention of Mr Elias Malapane within five (5) working days after award of the contract. Mr Malapane may be contacted on telephone (012) 394 1401, facsimile (012) 394 2401 or e-mail at Elias@thedti.gov.za for further details about the programme.

4 PROCESS TO SATISFY THE NIP OBLIGATION

4.1 Once the successful bidder (contractor) has made contact with and furnished the dti with the information required, the following steps will be followed:

a. the contractor and the dti will determine the NIP obligation;
b. the contractor and the dti will sign the NIP obligation agreement;
c. the contractor will submit a performance guarantee to the dti;
d. the contractor will submit a business concept for consideration and approval by the dti;
e. upon approval of the business concept by the dti, the contractor will submit detailed business plans outlining the business concepts;
f. the contractor will implement the business plans; and
g. the contractor will submit bi-annual progress reports on approved plans to the dti.

4.2 The NIP obligation agreement is between the dti and the successful bidder (contractor) and, therefore, does not involve the purchasing institution.

Where

\[ NEP = \text{Points awarded for equity ownership by an HDI} \]

CERTIFICATE OF INDEPENDENT BID DETERMINATION

1 This Standard Bidding Document (SBD) must form part of all bids invited.

2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging). Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.

3 Treasury Regulation 16A9 prescribes that accounting officers and accounting authorities must take all reasonable steps to prevent abuse of the supply chain management system and authorizes accounting officers and accounting authorities to:

   a. disregard the bid of any bidder if that bidder, or any of its directors have abused the institution's supply chain management system and or committed fraud or any other improper conduct in relation to such system.

   b. cancel a contract awarded to a supplier of goods and services if the supplier committed any corrupt or fraudulent act during the bidding process or the execution of that contract.

4 This SBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.

5 In order to give effect to the above, the attached Certificate of Bid Determination (SBD 9) must be completed and submitted with the bid:

---

1 Includes price quotations, advertised competitive bids, limited bids and proposals.

2 Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.

6. The bidder has arrived at the accompanying bid independently from, and without consultation, communication, agreement or arrangement with any competitor. However communication between partners in a joint venture or consortium\(^3\) will not be construed as collusive bidding.

9. The terms of the accompanying bid have not been, and will not be, disclosed by the bidder, directly or indirectly, to any competitor, prior to the date and time of the official bid opening or of the awarding of the contract.

2. PURPOSE

The Department of Environmental Affairs and the National Department of Health have identified a need to improve the segregation and management of HCRW within public institutions. This document provides the terms of reference for a HCRW management specialist, who will assists the Department in the development of a strategy for the segregation and management of Health Care Risk Waste (HCRW) in public institutions.

3. BACKGROUND

HCRW is potentially infectious and poses a threat to human health. This waste must therefore be separated from other wastes and treated before disposal. The segregation of HCRW from other wastes must take place as soon as possible after its generation. Systems must therefore be put in place which facilitate this segregation and to ensure that this waste is managed in a manner which is environmentally sound and protective of human health.

Work to develop such a segregation and management system has been undertaken both at the provincial and national spheres of government through two separate pilot projects. The first pilot project which was implemented by the Gauteng Department of Agriculture, Conservation and Environment in partnership with the Gauteng Department of Health developed a system for the segregation and management of HCRW generated within health care institutions in urban environments. The second pilot project which was implemented by the Department of Environmental Affairs in partnership with the National Department of Health developed a system for the segregation and management of HCRW generated within a rural environment.

The segregation of HCRW in urban system is initiated where the health care professional administers treatment to the patients. The nurse's trolley is fitted with a container to facilitate the separation of HCRW from general and infectious waste sharps from all other waste types. On completion of the rounds, the HCRW waste is transferred to a rack and bag system located in the sluice rooms within each ward. The HCRW from the various wards is consolidated by collection from the sluice room via a wheelie bin. Once the wheelie bin is full it is closed, labelled and stored in a dedicated HCRW storage area from where it collected and transported to the treatment facility. At the treatment facility the wheelie bin is captured into the system, the lid is opened and the waste is and automatically lifted and tipped into the treatment facility for treatment and disposal. The rural system is similar however, the HCRW waste is transported from the rural clinics and community health centers to the provincial hospitals for collection and further processing.

A training and awareness project administered through a tertiary institution was initiated in parallel with the segregation system. Awareness material was also developed and distributed. The pilot project was supported by an improved general waste management collection system.
4. **PROBLEM ANALYSIS**

Through the development and piloting of the urban and rural systems for the management of HCRW in public institutions several improvements were identified which included among others the following:

- the reduction of the waste stream through improved segregation;
- the improved third party protection through the removal of HCRW from locations accessible to the public;
- the protection of health care professionals and waste managers through the introduction of puncture proof containers;
- the reduced costs of HCRW management through the reduction of the waste stream, the introduction of reusable containers and the payment for the actual HCRW treated;
- the improved tracking and reporting on waste through the labelling and identification of health care institutions at which the waste was generated; and
- the reduced carbon footprint of HCRW management by the reduction of greenhouse gasses from landfilling of cardboard boxes.

Having determined the success of the advantages of the two piloted segregation systems, the benefits must now be realised by the implementation of the systems at all public health care institutions in the country. In order to implement the systems, the specifications for the systems must be documented, the associated costs must be determined and the most efficient implementation strategy identified determined with the view to present these findings to Cabinet for approval and funding. The work requires the assistance of a suitably qualified and experienced consultancy team in the field of HCRW management to support the Department of Environmental Affairs and the Department of Health in achieving these objectives.

5. **STRATEGY ANALYSIS**

Given the problem outlined above, the following strategy has been drafted for the consultancy that is the subject of these terms of reference.

5.1 **Learning from experience**

The consultancy that is the subject of these terms of reference is to focus on capacity building through the effective transfer of skills, experience, knowledge and expertise to DEA and DOH staff.

6. **OVERALL PROJECT OBJECTIVE**

*Develop strategy for the segregation and management of HCRW in public institutions.*

7. **IMMEDIATE PROJECT OBJECTIVES**

In order to contribute to the overall project objective, the consultancy has the following immediate objectives:

7.1 **Immediate objective A – Inception meeting and detailed workplan**

The Department of Environmental Affairs in consultation with the National Department of Health will consolidate the work undertaken in the two pilot projects and will document the systems to be implemented. This segregation systems work will be documented in a report and will be presented to the consultant team at the inception meeting. The inception meeting with the Project Management Group is to be held as the first task of the project.

At this meeting aspects of the project will be discussed and agreed. Following this workshop a comprehensive workplan is to be developed by the consultant team which will detail the project activities and timeframes for outputs. The workplan must include a payment schedule related to project outputs and must be approved by the project Director before work proceeds.

7.2 Immediate objective B – Consultation and confirmation of the rural and urban HCRW segregation and management system

The segregation systems report prepared by the Department describing the segregation systems is implemented is to be consulted with the healthcare professionals at all spheres of government. Once consulted, the segregation and management system must be presented to the National Department of Health for approval after which this segregation and management system will become the official system to be presented to the Cabinet for approval for implementation in the country. The consultation process is to be recorded and a comments and responses document must be prepared.

7.3 Immediate objective C – Generators database developed

The consultant team is to update the HCRW generation rates provided in the National Waste Management Strategy Implementation (NWMSI) project and the subsequent survey conducted in 2008 and capture the revised data into an access database. The database must be able to provide reports including but not limited to:

- HCRW generation rates for the country;
- HCRW generation rates for hospitals and clinics for the country;
- HCRW generation rates for private and public facilities for the country;
- HCRW generation rates per province for private and public facilities;
- Numbers of beds; and
- The number of health care facilities.

The database must be designed in a manner to allow easy updates by the Department of Health. Training on utilising the database must be provided to ten Health Officials. The consultant must take into consideration any existing databases in use by the Department of Health and must align the database to the extent possible.

7.4 Immediate objective D – Equipment requirements and costs

The consultant team is to identify the durable and capital items associated with the approved HCRW segregation and management system. Using the information provided by the database on numbers and types of health care institutions, the Consultant team is to determine and document the number of items required to implement the system for each health care institution type. Once the items and the number of items has been determined the associated costs are to be determined and documented. It is anticipated that the costing will include the following:

- Number of containers required in system, in transport and in cleaning (wheele bins, specie cans, kick-about trolley etc.);
- Number of racks required;
- Number of trolleys required;
- Vehicles (vehicle and trailers);
- Fridges;
- Number of consumables required (sharps containers, bags, cable ties, labels etc.);
- Frequency of purchase of consumables;
- On site storage facility requirements;
- Internal and external transport requirements;
- Distance between generator and treatment facility;
- Costs of treatment (scenarios to be developed);
- Frequency of collection (scenarios to be developed);
- Training requirements;
- Awareness materials;
- Costs associated with weighing and labelling;

The consultant team is to identify the breakages and the estimated annual replace costs of the capital equipment.

7.5 **Immediate objective E – Development of a costing model and running of implementation scenarios**

The consultant team is to design, develop and run a costing model which will utilise the information provided in segregation systems report and the information developed in 7.4 above to provide determine the costs for implementing and running the segregation and management system in the various types of health care facilities and include various implementation scenarios and timeframes. The costing scenarios must include among others the following:

- Costs of implementation in all hospitals or all clinics in a particular province;
- Costs of implementation in all hospitals and clinics within a particular province;
- Costs of implementation in all hospitals in South Africa;
- Costs of implementation all clinics in South Africa;
- Costs of implementation in all community health centres and clinics in a province; and
- Various timeframes for implementation of the scenarios.

The model must be approved by the Department before being implemented.

### 7.6 Immediate objective F – Strategy for implementing the national HCW management system

The consultant team will investigate the possible options to implement the HCRW management system including but not limited to implementation through the HCRW management tenders. In determining possible methods of implementation the team is to review the HCRW management implementation strategy proposed through the Gauteng and NWMSI projects as well as the existing provincial tender processes in place. In doing this the consultant team will need to meet with a representative sample of procurement officials at national and provincial health and local government, with the responsible officials in hospitals and clinics as well as with HCRW contractors. This review must include details of, amongst others:

- a detailed analysis of the existing procurement systems in place for HCW management within each Province;
- the current budget allocations for HCW management;
- an analysis of current provincial tender specifications included in tender documentation;
- the typical duration of tenders including an assessment of an appropriate tender duration;
- the costs of the existing tenders relate to a cost per bed;
- value of the existing contracts;
- contractual arrangements in place;
- conditions of tender including for example back up plans and insurances required;
- penalty clauses in the tender;
- the current status of the existing tender within each Province, and
due date for renewal.

A report on the current system being implemented is to be drafted which is to include recommendations for an appropriate implementation system which considers among other the above considerations.

Using the information on possible implementation strategies developed in 7.5 and having considered the methods for implementing the segregation and management system, the consultant team is to draft a report recommending various implementation strategies which includes the strengths and weaknesses and financial costs of each scenario. The scenarios must include the methods of implementation as well as costs for implementation i.e. implementation of the national system per province one province per year, or in all clinics nationally, then all provincial hospitals nationally etc. The development of the recommendations should be consulted with the two Departments as well as waste contractors and stakeholders who would be able to provide guidance on implementation.

The report prepared must provide a firm motivation for a preferred option for implementation. This report will be submitted to Cabinet for consideration and approval of funds depending on requirements.

This will include interviews or discussions with the proposed institutions to determine where the training material could be housed, making it available to any suitably qualified body wishing to conduct the training.

Based on the assessment undertaken the consultant team is to make a recommendation with respect to the most appropriate option for institutionalising the training material.
